

## CAPACCIOLI S.R.L

Operating from two manufacturing sites in Italy, Capaccioli s.r.l. design and manufacture a complete range of machinery for the production of bricks and ceramic tiles. Equipment manufactured by the Italian Company ranges from handling and feeding machinery through to kilns and dryers. Recent projects include a complete plant installation for Flemings Fireclays, (Ireland), which has an annual production of 680,000 Flue Liners, and a full manufacturing line for Maestrale (Italy), who produce over 40 million roofing tiles a year.

Capaccioli s.r.l. has also developed Easymud (soft-mud) Moulding, a revolutionary mechanised moulding process for manufacturing simulated hand-made bricks and ceramic tiles. This technique produces the typically irregular edges and variations in colour and texture normally associated with traditional handmade bricks, yet offers consistent high quality and cost effective production. Manufactured under a European Patent, Easymud was officially launched at Ceramitec 1996 and the first complete Easymud production line was commissioned in 1997.

**EASYMUD MOULDING, A  
REVOLUTIONARY MECHANISED  
MOULDING PROCESS FOR  
MANUFACTURING SIMULATED  
HAND-MADE BRICKS AND  
CERAMIC TILES.**

*Capaccioli chairman, Dr. Stefano Capaccioli (left), Emma Capaccioli and Craven Fawcett's Managing Director, Mark Ridgway celebrate the agency agreement between the two companies.*

Whether the aim is to enhance the prestigious nature of a building, to express individuality or simply to respect and reflect local construction traditions, the Easymud process is a proven technique for the cost effective production of simulated hand made bricks and tiles.
